

Thank you for your purchase of Inkjetmall Piezography Neutral K6 ink. This short document will provide you with important information about your inks.

1. **Cartridge installation:** the inks are filled in “universal cartridges,” meaning the cartridges can be inserted into any slot in the following Epson printer models: 7000/7500/9000/9500. If you are going to print using Studioprint RIP, you can install them in any order you wish, and then assign the ink channels depending on how they are installed. If you are using QuadToneRip, however, you must install the cartridges in a specific order to work properly with the software. Here is the order:

Ink cartridge slot:	Piezography Neutral K6 shade
Black	shade 1
Cyan	shade 2
Light cyan	shade 3
Magenta	shade 5
Light magenta	shade 6
Yellow	shade 4

2. **Flushing the old inks out and putting the new inks in:** There is another document which describes this process; the exact steps depend on which printer model you have. You will find this document at <http://inkjetmall.com/nk6support/index.html>.
3. **Using the printing software:** Both Studioprint and QuadToneRip are created and supported by other companies. However, we have written a “Getting Started” guide for use with QuadToneRip. This guide can also be found at the above link.
